## Commercial Construction Program

## Mercy Medical Center... Doing more than saving lives

**Mercy Medical Center** improved the health of its facility dramatically when it decided to update, renovate and expand its emergency room, operating room and Express Care units. It also replaced 20-year-old equipment with state-of-the-art, energy-efficient chillers, boilers and monitoring systems.

Not satisfied with a “band-aid” remedy, the Hospital took a comprehensive approach to its facility-wide enhancements. Through LIPA’s Commercial Construction Program, our Major Account Executives helped Mercy map out and complete its total plan for energy efficiency. Specifically, Mercy added: several variable-speed drivers, new centrifugal chillers, and a new energy management system. Together, these systems are helping Mercy operate more efficiently, cost-effectively and reliably - which, in turn, helps the hospital provide quality care to its patients.

“LIPA’s Program helped us make the decision to make all of these improvements. LIPA also helped us choose the right equipment for the greatest efficiency and energy savings,” said Paul Marotta, Mercy Medical Center’s Director of Facilities.

LIPA’s Commercial Construction Program is helping organizations across Long Island make the move to energy efficiency. With components ranging from simple equipment rebates to comprehensive whole building design, the Program is saving businesses energy while they save money. To find out more about this and other LIPA Clean Energy Initiative Programs, please call our EnergyWise Infoline at **1-800-692-2626** or visit our LIPA Web site at [www.lipower.org](http://www.lipower.org).
