Subject: Reducing electrical rates

I, like many seniors on a fixed income hope you will do the right thing by taking any steps that will reduce our electrical rates. The pandemic has put even more strain on everyone’s budget. We all need to see light at the end of the tunnel.

Thanking you all in advance for looking out after all your Long Islanders.

Sincerely,

Linda Balarezo

of the LIPA Board,

To: Governor Andrew Cuomo and the Long Island Power Authority (LIPA) Board of Trustees

The time has come to make a change. When The Governor and LIPA first brought in PSEG Long Island in the wake of Superstorm Sandy, it was an idea whose time had come to embrace the promise of a public/private partnership that could grow and provide Long island with the best of both worlds. For a time it was on track to be. But in the last several years, PSEG LI has fallen flat again and again, and not lived up to the promises made to make LIPA better, more transparent, more communicative and more resilient.

Other places have municipalized and expanded things like solar generation and vastly improved grid reliability, while keeping rates below their state’s average.

Municipalization would save $70 Million a year- that could be spent on resiliency, needed grid upgrades, clean energy investments, or pay down the debt.

Under state review and regulation, it could focus on reliability, accountability, transparency, communication and resiliency, and make those mandatory. State oversight would open us up to funding that is currently not available for many different programs as well.

Municipalization would give Long Islanders a say in their utility for a more democratic grid.

Different models for this are available for the board to choose, from a more traditional board structure to a university-based one, but all with input from all stakeholder groups, from local organizations to environmental advocacy groups

In light of this, and the reluctance of PSEG LI to improve their accountability and operations, it is time to move on from PSEG LI and the public-private partnership that did not live up to its promise.

The time has come for a strong, publicly run LIPA.

Subject: It is time to move LIPA to public power.

of the LIPA Board,

I firmly believe that municipalization is the way to go for LIPA. As a life long resident of Long Island, I have seen many failures, and PSEG LI, who was supposed to be our savior, has done no better! There is no reason that Long Island, with its population of approximately 3 million in Nassau and Suffolk counties, cannot find capable people to run an efficient and forward thinking utility (profiting the people, not the utility!). I did not support bringing in PSEG LI, and in my opinion we need to go to a new model of operation. I understand that municipalization could save as much as $70 million per year. That could be well spent on upgrades, maintenance and investment in a clean energy future. As an island, and a low lying one at that, we need to focus on what works best for us and our future. Let's move to a publicly run utility, for the benefit of all Long Islanders. Thank you.

Sincerely, Katherine Congdon Caldwell

of the LIPA Board,

Dear Governor Andrew Cuomo and the Long Island Power Authority (LIPA) Board of Trustees,

My name is Nicolas Shearman, lifelong New Yorker who lived on Long Island for over 20 years. During my time on Long Island, I witnessed the decrease in quality utility service under PSEG in response to storms and slow progress in modernizing the Island's utility infrastructure. I write today to urge you to embrace full public management and operation of LIPA as a public utility to meet the energy, utility justice, and climate challenges Long Island is facing.

The time has come to make a change. When The Governor and LIPA first brought in PSEG Long Island in the wake of Superstorm Sandy, it was an idea whose time had come to embrace the promise of a public/private partnership that could grow and provide Long Island with the best of both worlds. For a time it was on track to be. But in the last several years, PSEG LI has fallen flat again and again, and not lived up to the promises made to make LIPA better, more transparent, more communicative and more resilient.

Other places have municipalized and expanded things like solar generation and vastly improved grid reliability, while keeping rates below their state's average.

Municipalization would save $70 Million a year- that could be spent on resiliency, needed grid upgrades, clean energy investments, or pay down the debt.

Under state review and regulation, it could focus on reliability, accountability, transparency, communication and resiliency, and make those mandatory. State oversight would open us up to funding that is currently not available for many different programs as well.

Municipalization would give Long Islanders a say in their utility for a more democratic grid.

Different models for this are available for the board to choose, from a more traditional board
structure to a university-based one, but all with input from all stakeholder groups, from local organizations to environmental advocacy groups.

In light of this, and the reluctance of PSEG LI to improve their accountability and operations, it is time to move on from PSEG LI and the public-private partnership that did not live up to its promise.

The time has come for a strong, publicly run LIPA. I look forward to seeing you make it happen.

Sincerely,
Nicolas Shearman

Subject: Going in the wrong direction PSEG

of the LIPA Board,

To whom it may concern:
I do not profess to know the inner workings of a power authority and I have no doubts that the responsibility of generating power to Long Island, especially during emergency situations is daunting. Yet, what I do know is that since PSEG took over, our service has been noticeably worse! Hurricane Sandy was a devastation for Long Island and due to what we went through as a homeowner, we felt "forced" to incur the expense of purchasing a generator as we didn't feel comfortable depending on our power company any longer in emergency situations! As well, the few times we attempted to contact customer service for questions we had, we felt that customer service was basically non-existent since PSEG got involved. My vote would be to bring back LIPA. I felt a greater sense of safety and connection when LIPA was in charge of Long Island!

Subject: Make LIPA a public utility

of the LIPA Board,

After 36 years, it is clear the LIPA public-private partnership model is a failure.

How can it work when the parent private company treats Long Island like a stepchild? Or when the private company owes its allegiance to its stockholders? A public utility would answer to...the public!

We need a public electric utility that is accountable, communicative, reliable, resilient and transparent. We need a say in how our utility is run. And we need it now.

To: Board of Trustees <boardoftrustees@lipower.org>
Subject: PSEG LI vs Public Interest

of the LIPA Board ,

To: Hon. Gov. Cuomo,

The electric power utility on Long Island is a continuing nightmare. First, LILCO withheld service because they were beholden to nuclear interests and instead they were obsessed with building a nucular reactor in Shoreham. Now, PSEG has adopted the corporate philosophy, "Maximize profits today regardless of tomorrow or customer concerns."

The customers have had enough of Corporate Profits being first priority. Let the corporations eat cake. The time has come for a strong, publicly run LIPA.

Jay Blackman
of the LIPA Board,

It's time to put people, and our environment above private company profits. PSEG LI has shown time and again they are not up to handling the energy needed by Long Islanders. Their lack of major investments in power line infrastructure has caused many occasions of power outages. The record shows that cities, towns and villages (Freeport and Rockville Centre) with public utilities do much better and have greater customer satisfaction than privately run utilities. It's time to step up and allow LIPA and the people of LI decide how our energy will be produced and delivered.

Jay Blackman

Subject: We Can Do Better Than PSEG

of the LIPA Board,

PSEG has done little good and A LOT of bad in our LI communities. They destroyed quaint main streets — making them look like electric transfer stations — with 80 foot power poles with no input from the community (most of whom would have gladly paid to bury the lines) and hired incompetent tree trimmers who cut down and multilateral THOUSANDS upon thousands of trees — one of our most precious and beautiful resources on LI. And for what?! The electricity still goes out. The pricing is labile and has jumped for some double or even triple previous pricing in the midst of an economy-crushing pandemic. PSEG has GOT TO GO.

The time has come for a strong, publicly run LIPA.

DENNIS VECCHIARELLO
of the LIPA Board,

To: Governor Andrew Cuomo and the Long Island Power Authority (LIPA) Board of Trustees

The time has come to make a change. When The Governor and LIPA first brought in PSEG Long Island in the wake of Superstorm Sandy, it was an idea whose time had come to embrace the promise of a public/private partnership that could grow and provide Long Island with the best of both worlds. For a time it was on track to be. But in the last several years, PSEG LI has fallen flat again and again, and not lived up to the promises made to make LIPA better, more transparent, more communicative and more resilient.

Other places have municipalized and expanded things like solar generation and vastly improved grid reliability, while keeping rates below their state's average.

Municipalization would save $70 Million a year- that could be spent on resiliency, needed grid upgrades, clean energy investments, or pay down the debt.

Under state review and regulation, it could focus on reliability, accountability, transparency, communication and resiliency, and make those mandatory. State oversight would open us up to funding that is currently not available for many different programs as well.

Municipalization would give Long Islanders a say in their utility for a more democratic grid.

Different models for this are available for the board to choose, from a more traditional board structure to a university-based one, but all with input from all stakeholder groups, from local organizations to environmental advocacy groups

In light of this, and the reluctance of PSEG LI to improve their accountability and operations, it is time to move on from PSEG LI and the public-private partnership that did not live up to its promise.

The time has come for a strong, publicly run LIPA.

of the LIPA Board, 

To: Governor Andrew Cuomo and the Long Island Power Authority (LIPA) Board of Trustees

The time has come to make a change. When The Governor and LIPA first brought in PSEG Long Island in the wake of Superstorm Sandy, it was an idea whose time had come to embrace the promise of a public/private partnership that could grow and provide Long island with the best of both worlds. For a time it was on track to be. But in the last several years, PSEG LI has fallen flat again and again, and not lived up to the promises made to make LIPA better, more transparent, more communicative and more resilient.

Other places have municipalized and expanded things like solar generation and vastly improved grid reliability, while keeping rates below their state's average.

Municipalization would save $70 Million a year- that could be spent on resiliency, needed grid upgrades, clean energy investments, or pay down the debt.

Under state review and regulation, it could focus on reliability, accountability, transparency, communication and resiliency, and make those mandatory. State oversight would open us up to funding that is currently not available for many different programs as well.

Municipalization would give Long Islanders a say in their utility for a more democratic grid.

Different models for this are available for the board to choose, from a more traditional board structure to a university-based one, but all with input from all stakeholder groups, from local organizations to environmental advocacy groups

In light of this, and the reluctance of PSEG LI to improve their accountability and operations, it is time to move on from PSEG LI and the public-private partnership that did not live up to its promise.

The time has come for a strong, publicly run LIPA.

Barbara Hafner
of the LIPA Board,

Good afternoon,

I am a homeowner in Nassau County and I would like you to vote for Rate Savings for LIPA.

Thank you.

Best,

Mary Ann Gagliardi
of the LIPA Board,

To: Governor Andrew Cuomo and the Long Island Power Authority (LIPA) Board of Trustees

The time has come to make a change. When The Governor and LIPA first brought in PSEG Long Island in the wake of Superstorm Sandy, it was hoped that a public/private partnership could grow and provide Long Island with the best of both worlds. While in the beginning this appeared to be true, in the last several years, PSEG LI has failed to meet their promises to make LIPA better, more transparent, better able to communicate with its customers and more resilient.

Other places have municipalized and expanded things like solar generation and vastly improved grid reliability, while keeping rates below their state's average.

Municipalization would save $70 Million a year. Those monies could be spent on resiliency, needed grid upgrades, clean energy investments, or paying down the debt. It would also give Long Islanders a say in their utility for a more democratic grid.

Different models for this are available for the board to choose, from a more traditional board structure to a university-based one. All of these would provide for input from all stakeholder groups, from local organizations to environmental advocacy groups

In light of this, and the reluctance of PSEG LI to improve their accountability and operations, it is time to move on from PSEG LI and the public-private partnership that did not live up to its promise.

The time has come for a strong, publicly run LIPA.

Karen Zilber

I don't need to repeat what has already been said in the other letters on this topic that I know you have received. Suffice to say that I add my name to the list of Long Islanders who want to see a publicly run LIPA.

Thank you for your attention.

Sincerely,
Maureen Garvey

LIPA Board meetings should be multiple and accessible at different times so working people can participate as well. New Yorkers deserve utilities that are accountable, meet high standards for resilience and equity, and will prevent climate catastrophe by moving off fossil fuels to renewable energy.

New Yorkers deserve Public Power -- starting now with Long Island.
Long Island can blaze a new path for New York by creating a fully Public Power utility that ends our reliance on fossil fuels and provides clean, reliable, affordable power for all. Thank you!

My name is Noah Plofker, a resident of Holtsville, and a Long Island utility ratepayer. Years of public-private partnerships under LIPA have removed us from an energy system in service of people, not profits. On good days, I pay outrageous rates for inadequate service. On bad days, I wait in the dark unable to get clear answers on when service will return. On all days, we all maintain reliance on climate-wrecking fossil fuels that put our region at risk of further catastrophe. Our utility consistently fails us, no more apparent than during last summer’s Tropical Storm Isaias which proved PSEG LI incapable of responding to the challenge of providing and maintaining the resilient electric grid that Long Islanders need.
We must fully commit to a new paradigm of energy management on Long Island and oppose any efforts to further privatize our energy services. Across the country, publicly owned utilities have proven more affordable and reliable for residential customers. They are more responsive to customer needs, yielding better customer satisfaction. Their shorter outage times safeguard households' food and medicine and improve the productivity of small businesses. With a proper process in place, we can reimagine, reinvent, and restructure LIPA so that it is led by those most impacted by decisions concerning our energy system. We can ensure that those who use, pay for, and work for the system have a say in how it runs.

I'm calling on LIPA to terminate their contract with PSEG LI as soon as possible and fully municipalize. I demand a genuine, inclusive, and robust process as LIPA's path forward is determined. We can no longer separate LIPA from everyday Long Islanders. We need a public process that convenes appropriate stakeholders to serve as a watchdog in this crucial moment through public hearings, town halls, and other forms of participatory community engagement.
My name is Richard Viesta, a resident of Port Washington, and a Long Island utility ratepayer.
