I urge the LIPA board to move toward a more democratically structured energy system-- a system that would be more responsive to the needs of the public. The LIPA board should terminate its contract with PSEG, eliminating privatization, and instead move toward a truly public-oriented, rather than profit-oriented system. Including a broad range of stakeholders will work toward providing climate justice as well as confronting the basic and far-reaching environmental impacts of climate change, best handled by a fully-public entity.
