**Comment:**

This new plan sounds a bit iffy. What happens to the person coming home from work at 4:00, getting dinner ready, throwing a load of clothes in washer, she/he is already using peak hours. What's a person to do if that's all the time they have..

I for one do laundry in the morning, 2-3 times a week, use my dryer for about 5 minutes, then hang clothes. we use the dishwasher 2-3 times a a week after 7:00 p.m. and have few lights on in our hone. We sit with socks and sweaters, two blankets on the bed..and still get a " budget" based bill of \$235.. so at what point am I supposed to use electricity and save..

We watch tv for about 2-3 hrs a night, use an iPad and computer for an hr or two total for the day..what am I doing wrong...and PSEG installed a smart meter!!! Nothing smart about my bills.
